

Forming Metals *and* Relationships

Prop 65 requires that a company give a “clear and reasonable warning” to the individuals before “knowingly and intentionally” exposing them to Proposition 65 listed chemicals unless the company can demonstrate that the exposure is so small that it causes “no significant risk” of cancer or “no observable effect” with regard to reproductive toxins. For many listed Prop 65 chemicals, a CA agency has determined “Safe Harbor” levels of exposure, below which no warning is required. The list of chemicals and other information regarding Prop 65 can be accessed at www.oehha.ca.gov/prop65.

Winco Stamping is committed to providing safe, high quality products for our customers. We have worked with our vendors and our supply chain partners toward the purchase of raw materials that will meet Prop 65 standards.

However, Winco Stamping cannot test every piece of every order that we ship to California for every one of the Proposition 65 listed 700+ chemicals. Furthermore, stainless Steel contains two chemicals listed under CA Prop 65: Nickel and Chromium. Metallic nickel and metallic chromium are in *all* stainless steel – they are the key components that make the steel “stainless”. Due to stainless steel containing chemicals listed under CA Prop 65, and without Winco Stamping knowing the intended use of the parts, we take the stance that these products are not CA Prop 65 compliant.
